SureStep™

SureStep™ brands offer point-of-care testing options for pregnancy, ovulation and drugs of abuse. All the tests are easy to perform and provide accurate results in a matter of minutes.

Human chorionic gonadotropin (hCG) is a hormone that is released shortly after conception. The SureStep™ and SureStrip® pregnancy tests aid in the rapid detection of hCG in urine. Both products exhibit accuracy levels exceeding 99% and have the ability to detect pregnancy as early as the first day of a missed period.

Prior to ovulation, the female body releases luteinizing hormone (LH). The SureStep™ ovulation test is designed to detect elevated levels of LH in urine and assists in predicting the time of ovulation and peak fertility. The SureStep™ ovulation test can be performed in only five minutes and provides 99% accuracy.

The SureStep™ Drugs of Abuse products are simple, one-step tests for the detection of drugs of abuse in urine. These tests are available in a variety of product formats, including single drug strips and devices, multi-drug panels, multi-drug devices, and integrated cups.

The testing menu for the SureStep™ Drugs of Abuse product portfolio encompasses 25 separate analytes, including tests for marijuana, amphetamine, methamphetamines, ecstasy, opiates, methadone, benzodiazepines, barbiturates, propoxyphene, oxycodone, phenacyclidine and tricyclic antidepressants, with sensitivity levels tailored to various market requirements.
